6Post Graduate Scholar, Department of Kaumarbhritya, National Institute of Ayurveda, Deemed to be University (De-novo), Jaipur, Rajasthan, India.

INTRODUCTION

Oral submucosal fibrosis (OSMF) is a chronic, progressive scarring disease that primarily affects people of Asian descent. The disease was first described by Schwartz with the descriptive term Atrophia idiopathica (tropica) mucosae oris. In late 1953, Joshi renamed the disease OSMF, alluding to its primarily histological characteristics.[1] OSMF is an insidious chronic disease affecting any part of the oral cavity and sometimes the pharynx. Although occasionally preceded by and/or associated with vesicle formation, it is always associated with a juxta epithelial inflammatory reaction, which is followed by a fibroelastic change of the lamina propria, with epithelial atrophy leading to stiffness of the oral mucosa and causing trismus and inability to eat.[2]

The most recent definition describes the characterization, biological behaviour, etiology, and prognosis of OSMF. It's defined as a debilitating, progressive and irreversible collagen metabolic disorder caused by chronic chewing of areca nut and its commercial preparations; affecting the oral mucosa.
and occasionally the pharynx and oesophagus; resulting in mucosal stiffness and functional morbidity; and having a potential risk of malignant transformation.

According to Acharya Sushruta, OSMF and Sarvasara Mukha Roga (Oral Cavity Diseases) are related in Ayurveda. Mukha Roga (diseases of the oral cavity) are characterized by symptoms such as mouth discomfort, blanching of the oral mucosa, a burning feeling in the mouth, difficulty opening the mouth, and others.[3]

Some Mukha Roga therapies like Nasya (nasal medicine), Kavala (gargling), and Gandusha (oil pulling) are some that can be used for OSMF. In Sanskrit, Ayu represents life, and Veda denotes wisdom. Ayurveda is the name of the living science that treats patients holistically. It is among the world’s first medical systems.[4]

According to the World Health Organization (WHO), 70–80 percent of people around the world use Ayurvedic medication.[5] Ayurvedic medicine have been practiced in India since ancient times, according to the Shastra. Ayurvedic treatments can be used to treat a variety of dental problems, such as periodontitis, oral lichen planus (OLP), tooth problems, oral cancer, OSMF, and oral mucosa lesions (OML) etc. Numerous studies have shown the effectiveness of Ayurvedic therapies or medications in treating OSMF.[6]

**METHODS**

This article’s content is based on both my own clinical experiences and a wide range of clinical investigations on OSMF and its management that have been published in indexed and non-indexed journals. Both the Ayurvedic Samhitas and their commentaries are explored. Textbooks on modern medicine and Ayurveda were used to collect information.

**RESULTS AND DISCUSSION**

**Aetiology of OSMF**

Number of Sarvasara Rogas According to Various Acharyas:

According to Acharya Sushruta Vataja, Pittaja and Kaphaja Sarvasara (Mukharoga) are the three disorders.[7]

Acharya Vagbhatta has mentioned Vataja, Pittaja, Kaphaja, Raktaja and Sannipataja Mukharoga along with Arbuda, Urdhva Guda and Pootiasyata.[8]

The aetiology of OSMF is unknown. Most of the proposed ideas are derived from existing clinical and epidemiological data. Given the proportion of female patients, the question can be asked whether OSMF is due to the prevalence of habits such as tobacco/nut chewing among women in the study population. Most studies on OSMF have emphasized only the role of irritant substances acting locally on the oral mucosa. An equally important second aspect which needs to be considered is the pre-conditioning of the oral mucosa by a prolonged, chronic deficiency of iron and/or vitamin B complex. Such conditions are much more commonly seen among Indian females than males, which may explain the higher incidence of OSMF among females. Other fibrotic diseases related to the basal lamina and involving underlying muscles are known, e.g., endomyocardial fibrosis.

The various hypotheses proposed so far suggest that the cause of this disease is multifactorial. In addition to the role of local irritants such as capsaicin,[13] tobacco, betel nuts, hot and spicy foods, and alcohol, the geographic and ethnic distribution of OSMF suggests an underlying systemic predisposition. Among the systemic factors, the main ones incriminated are...
chronic iron and vitamin B-complex deficiency, anaemia, and a genetic predisposition to the disease.

**Synonyms**
- Submucous fibrosis of the palate and pillars (Joshi, 1952).
- Diffuse oral submucous fibrosis (Lal 1953).
- Idiopathic scleroderma of mouth (Su, 1954).
- Submucous fibrosis of palate and cheek (Desa, 1957).
- Oral submucous fibrosis (Pindborg and Sirsat, 1966).
- Subepithelial fibrosis (Goleria, 1970).
- Idiopathic oral fibrosis (Krishnamoorthy, 1970).

**Clinical Features**

The symptoms of OSMF are:
1. Burning sensation and blanching of oral mucosa.
2. Moderate limit of mouth opening.
3. Bud shaped or shrunken ovula.
4. Depapilated tongue and ulceration on tongue.
5. Blister or marble like appearance on soft palate and inflammation in oral mucosa occurs.
6. Mobility of tongue and soft palate decreases.
7. Excessive salivation and bad breath.

**Symptoms**

**Treatment**

Medical treatment is symptomatic and predominantly aimed at improving mouth movements.

Surgical treatment is indicated in patients with severe trismus and/or biopsy results revealing dysplastic or neoplastic changes.

Decrease or eradicating habit of chewing areca nut play and important role in preventive measure aspect. To improve current treatment regimens for OSMF, the following strategies have been proposed:

1. Nutritional support
2. Immunomodulatory Drugs
3. Physiotherapy
4. Local Drug Delivery
5. Combined therapy
6. Surgical management.

**Chikitsa in Ayurveda**

1. *Nidan Parivarjan* - Avoid using factors that cause oral ulcers.
2. *Samanya Chikitsa* - Mukhdhavana (Mouth wash), Charwana (Chewing), Pratisarana (local application), Kashayapana, Kavalagraha, Kayavirechana
3. *Vishesh Chikitsa*

Pathya-Apathya Ahara Vihara

Pathya

- Yogaratnakara has mentioned Pathya Apathya of Mukharogas as Swedana, Virechana, Yamana, Gandusha, Pratisarana, Kavalal, Raktamokshana, Nasya, Dhoopanpana, Shashtrakarma, Agnikarma.

- Truna Dhanya, Yava, Mudga, Kulattha, Jangala Mamsarasa, Satavari, Karavelkaka, Patola, Balamukula, Karpura Jala, Ushnodaka, Tambula, Ghrita, Khadira, Katu, Tikta Dravyas.\(^{[18]}\)

- One should be encouraged for Kshira and Ghrita Bhojana owed to its Rasayana and Vata Pitta Shamana effects.

- Oral hygiene- various measures for preserving oral health as a part of daily regimen (Dinacharya). Only Ayurveda has mentioned eight measures as a part of Dinacharya to keep tongue, teeth, gums & whole oral cavity (Mukha) clean. They are Dantadhavana/ Dantapavana, Dantashodhana Choorna (manjana), Jhivanirlekhana, Gandusha, Kavala, Pratisarana, Mukhaprakshalana, Tambulasevana.

Apathya

- According to Yogaratnakara Danta Kashtha, Snana, Amla Dravya, Matsya, Anupa Mamsa, Dadhi, Kshira, Guda, Masha, Rukshana, Kathina Dravyas, Guru, Abhishyandhi Ahara, Divaswapna, Adhomukhashayana are Apathya in Mukharoga.\(^{[19]}\)

- Excessive use of Kashaya Rasa, Katu Rasa, Ruksha, Vikasi, Ushna, Tikshna Dravyas betel nut, tobacco and its related products like Gutka, Mawa, Pan Masala etc. an excessive use of chillies and spicy food must be avoided.

CONCLUSION

The present article opines that Ayurvedic treatment protocols ensure the normalcy of the oral mucosa. It is effective in the management of OSMF without any adverse effects and has sustained relief in follow-up. It can be considered a better alternative to the modern treatment modality in the management of OSMF. This article is an honest attempt to connect references from a variety of sources and compare and contrast the two terminologies. On the basis of Sarvasara Mukharoga's OSMF, patients should be assessed for illness symptoms and signs. The procedure described by Acharya in Mukharoga can be used to cure OSMF (Sarvasara). This comparison of the two terminologies may be helpful in Ayurvedic research. Due to faulty habits such as smoking and tobacco chewing, OSMF is on the rise and requires timely, newer interventions such as Gandusha with relevant herbs. Ayurveda works well for chronic ailments, and there is no chance of side effects.
